

## Volume X

MARCH 2021

### March Highlights

- **Turboden generator and turbine jack and rolled into position in ORC building**
- **Techmation mobilizes to site to fulfill RFP-021 Installation of Plant Electrical and Instrumentation**
- **Site visit from Member of Parliament, Gary Vidal to get a progress update on the MLTC Bioenergy Centre**

## Great Things are Happening

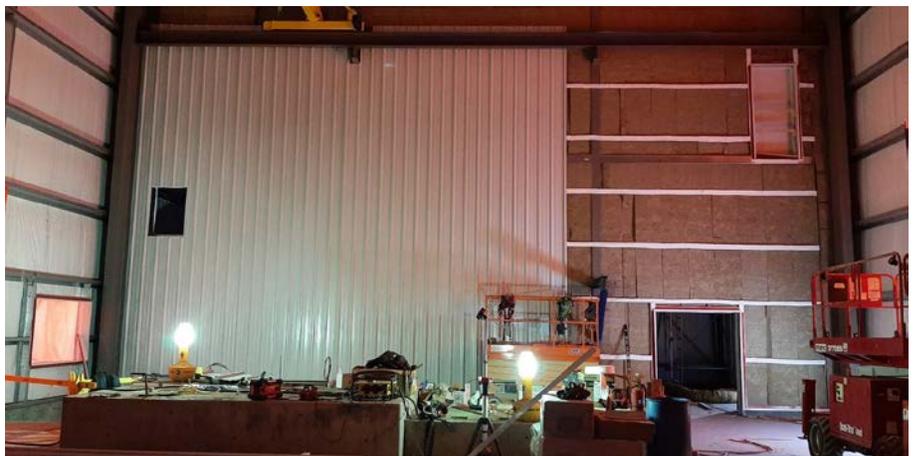

Construction progressed well throughout the month of March despite a strong winter storm in the later part of the month. There was a significant amount of work completed in a number of areas of the project; mainly the Thermal Oil Plant and ORC Building.

As we shift into the spring and summer months, a majority of the work will be focused on both the installation of plant piping and mechanical, as well as the installation of plant electrical and instrumentation. The construction of foundations will soon begin in areas such as the grinder, conveyors, fuel silo and substation.

Construction safety and safety around COVID-19 remain a priority on the construction site and will continue to be navigated as the project moves on.

Unwrapping of the Turboden generator

## A Conversation with Jenalee Blatz, Robwel Constructors LP

Jenalee plays a key role in coordinating administrative duties and a crew of construction workers within Robwel Constructors LP. As the Site Administrator, she has a front row seat to see all of the day to day construction activities happening at the MLTC Bioenergy Centre.

Jenalee spends many hours on the construction site in Meadow Lake but her work doesn't stop there. She is also a mother of two, a thriving entrepreneur, fitness instructor, and in the past years, a helping hand with her father's chuck wagon team until his retirement in 2020!

As a member of the Flying Dust First Nation, Jenalee takes pride in MLTC's progression, the opportunities provided for companies such as Robwel to contribute to the project and the major economic opportunity it has for generations to come.

"Having two brothers who work in trades, one as a carpenter and one as an electrician/instrumentation tech, it's nice to be able to talk about work now with my family. I've got to learn about the different trades and gain a better understanding of what they do on a daily basis. Working close to home also allows me to spend every night with my husband Phil and our two young children."

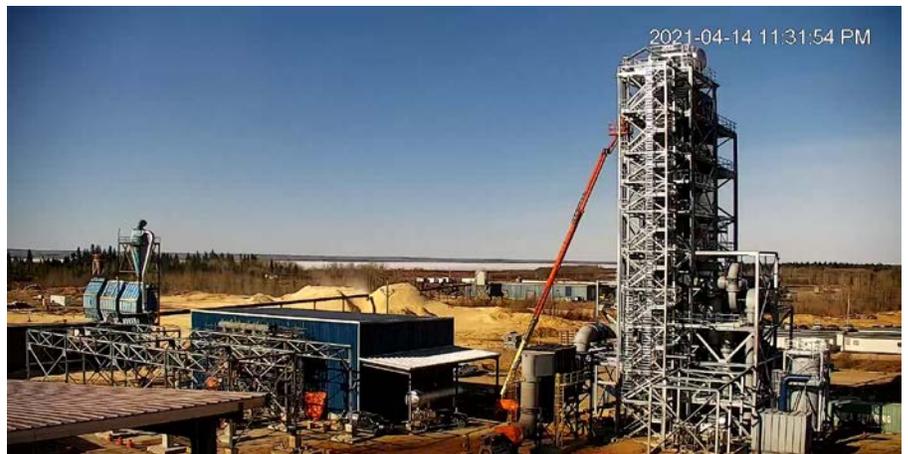

**Thank you for your contributions to the MLTC Bioenergy Centre!**

Cyclone ducting work completed in March 2021

Site visit/tour. (L to R: Gary Vidal (local MP), Al Balisky (CEO of MLTC Industrial Investments), John Hamstra (Project Manager), Grant Lindsay (Design Engineer)
